

HACK A HALLOWEEN PUMPKIN

With Arduino Multicolor LED Option

Notice that the breadboard has rows (1–17) and columns (A–J).

1. Push the LED into the breadboard in H4–H7, with the longest lead in H5
2. Move the jumper from the rangefinder's VCC from the Arduino to B5
3. Connect Arduino 5V to C5
4. Connect Arduino 9 to J7
5. Connect Arduino 10 to J6
6. Connect Arduino 11 to J4
7. Connect the resistor from A5 to F5
